```

Out[20]:

	PassengerId	Survived	Pclass	SibSp	Parch	Embarked	Gender	age
0	1	0	3	1	0	S	1	22.0
1	2	1	1	1	0	C	2	38.0
2	3	1	3	0	0	S	2	26.0
3	4	1	1	1	0	S	2	35.0
4	5	0	3	0	0	S	1	35.0

We want to check if "Embarked" column is is important for analysis or not, that is whether survival of the person depends on the Embarked column value or not###

In [22]:
```
# Finding the number of people who have survived
# given that they have embarked or boarded from a particular port

# Use combined conditions with & and parentheses
survivedQ = titanic[(titanic.Embarked == 'Q') & (titanic.Survived == 1)].shape[0]
survivedC = titanic[(titanic.Embarked == 'C') & (titanic.Survived == 1)].shape[0]
survivedS = titanic[(titanic.Embarked == 'S') & (titanic.Survived == 1)].shape[0]

print(survivedQ)
print(survivedC)
print(survivedS)
```

```
30
93
217
```

In [24]:
```
survivedQ = titanic[(titanic.Embarked == 'Q') & (titanic.Survived == 0)].shape[0]
survivedC = titanic[(titanic.Embarked == 'C') & (titanic.Survived == 0)].shape[0]
survivedS = titanic[(titanic.Embarked == 'S') & (titanic.Survived == 0)].shape[0]

print(survivedQ)
print(survivedC)
print(survivedS)
```

```
47
75
427
```

As there are significant changes in the survival rate based on which port the passengers aboard the ship. We cannot delete the whole embarked column(It is useful). Now the Embarked column has some null values in it and hence we can safely say that deleting some rows from total rows will not affect the result. So rather than trying to fill those null values with some vales. We can simply remove them.

In [25]:
